DIGITAL CAPABILITIES

FRONT-END DEVELOPMENT

Our front-end development stack is built using the Bootstrap framework allowing mobile responsiveness out the box.

SOURCE CONTROL

To ensure that every project is managed and backed up correctly, we make use of secure online git repositories. These are online storage blocks that allow easy collaboration between our developers and for working with external partners.

E-COMMERCE

Depending on the project type, we work on a wide variety of e-commerce platforms. For a bespoke, stand-alone platform, we would use either Magento or Shopify (size of project dependent).

ARCHITECTURE & BACK-END

We believe in using open-source frameworks for development - ensuring maximum scalability and support. Depending on the size and nature of the project we would choose between a Content Management System (CMS) - usually Wordpress, or the full MVC framework Laravel for bespoke applications.
